

How To Setup A Bitcoin Based Online Store For Free And Start Selling In 15 Minutes

By Chris Coney

Bitcoin is a new technology that is creating opportunities that are not just new, **they were not even possible before.**

Have you also noticed how new technology **breaks down barriers to individual prosperity?**

Well with Bitcoin, the time for that to happen has come again.

Ecommerce is the **gold rush** of our day. But with websites, domain names, databases, servers and all that stuff in the way, it remains accessible only to those who have the knowledge or who have the money to pay someone with that knowledge.

Until now.

I'm going to show you how to setup your own online store, which you can host on your own computer, which takes payments in Bitcoin and that can be ready to take your first order **in under 15 minutes.**

Here's how to do it:

1. Go to <https://openbazaar.org>
2. Download the app and install it
3. Once installed go to Menu > Create Listing to setup a product or service you want to sell
4. Go to Menu > Settings and fill out your profile information
5. For a full vendor tutorial go to <https://blog.openbazaar.org/vendors-guide-to-openbazaar/>

I've got so much more to share with you about Bitcoin but it's bye for now.
